

Congratulations on your purchase of the OBR ADV Gear Spare Tire Storage Bag. The Spare Tire Storage Bag has been designed as a universal fit application to work with a varying style of UTV/ATV wheels ranging in size from 12"-16".

Installation of your storage bag is super simple by using the included cam buckle strap. Simply pass the strap through the outside loop on the backside of the storage bag. Then pass the strap through a corresponding spoke opening of your spare tires rim ... move to the next spoke opening and pass the strap back through to the storage bag. Continue this process around the rim. You are essentially lacing the storage bag to the rim. We have found it best to start with the cam buckle at the top (or 12 o'clock) on the spare tire rim.

You will probably find that there is extra strap length. We advise that you can either fold the strap and secure, or trim down the strap length leaving a minimum of 6" to the strap tail. If you choose to trim the strap either use a bladed hot tool or be sure to melt the raw cut ends to prevent future fraying.

That's it ... you're done! Now go and ride!
